List of Contents

NUMBER 1

i Softstrip® data strip containing the table of contents of this issue

Bryan L. Deuermeyer and **Guy L. Curry** — 1 On a language for discrete dynamic programming and a microcomputer implementation

Michael D. Oliff, Holly S. Lewis and **Robert E. Markland** — 13 Aggregate planning in crew-loaded production environments

Israel Spiegler and **Yehuda Noff** — 27 Dynamic reliability as an alternative to overall data base restoration

Lawrence Bodin and **Judy Brown** — 39 A model for the allocation of graduate assistant hours: an anecdote on the application of operations research

Lawrence Bodin, George Fagin, Ron Welebny and **James Greenberg** — 45 The design of a computerized sanitation vehicle routing and scheduling system for the town of Oyster Bay, New York

Jati K. Sengupta — 55 Nonlinear measures of technical efficiency

Jean Aubin and **Jacques A. Ferland** — 67 A large scale timetabling problem

Ue-Pyng Wen and **Shuh-Tzy Hsu** — 79 A note on a linear bilevel programming algorithm based on bicriteria programming

NUMBER 2

i Softstrip® data strip containing the table of contents of this issue

Wojciech Szpankowski — 85 Some remarks on uniformly bounded Markov chains: multimodality analysis

Bart van Arem — 101 Discrete time analysis of a slotted transmission system

Guo-Liang Xue — 113 On the convergence of one-dimensional simplex search

B. Malakooti — 117 Ranking multiple criteria alternatives with half-space, convex, and non-convex dominating cones: quasi-concave and quasi-convex multiple attribute utility functions

Richard M. Burton and **Børge Obel** — 129 Using historical information in the design of a decentralized firm's budgetary planning system

Jonathan F. Bard and **Jeanne L. Miller** — 145 Probabilistic shortest path problems with budgetary constraints

P. Simin Pulat — 161 A decomposition algorithm to determine the maximum flow in a generalized network

Irvin J. Lustig 173 An analysis of an available set of linear programming test problems

Note
D. J. White 185 The "largest element first" heuristic for the maximization assignment problem

NUMBER 3

i Softstrip® data strip containing the table of contents of this issue

Eng Ung Choo and **Gin Hor Chan** 189 Eyeballing heuristics for dynamic lot size problems

Wojtek Michalowski and **Tomasz Szapiro** 195 A procedure for worst outcomes displacement in multiple criteria decision making

A. Ariav, Y. Kahane and **C. S. Tapiero** 207 A pooled computer center as a risk management tool

André B. Bondi 217 An analysis of finite capacity queues with priority scheduling and common or reserved waiting areas

Hasan Pirkul and **Yu-Ping Hou** 235 Allocating primary and back-up copies of databases in distributed computer systems: a model and solution procedures

Krishnamurty Muralidhar and **Marietta Tretter** 247 The evolution of an expert DSS for electric utility load research

Cheng-I. Yang, Jia-Shung Wang and **R. C. T. Lee** 257 A branch-and-bound algorithm to solve the equal-execution-time job scheduling problem with precedence constraint and profile

Tep Sastri, Benito Flores and **Juan Valdés** 271 Detecting points of change in time series

NUMBER 4

i Softstrip® data strip containing the table of contents of this issue

R. K. Arora and **R. K. Sachdeva** 295 Distributed simulation of resource constrained project scheduling

Richard A. Murphy 305 An improved direct descent algorithm for binary knapsack problems

Mahmut Parlar and **Yigal Gerchak** 315 Control of a production system with variable yield and random demand

R. P. Hope and **J. A. Sharp** 325 The use of two planning decision support systems in combination for the redesign of an MBA information technology programme

Tapan Sen, Parthasarati Dileepan and Jatinder N. D. Gupta 333 The two-machine flowshop scheduling problem with total tardiness

Jayprakash G. Patankar and Amitava Mitra 341 A multi-objective model for warranty cost estimation using multiple products

Tom M. Cavalier, James P. Ignizio and Allen L. Soyster 353 Discriminant analysis via mathematical programming: certain problems and their causes

M. C. Gupta, C. Judt, Y. P. Gupta and S. Balakrishnan 363 Expert scheduling system for a prototype flexible manufacturing cell: a framework

Jay E. Aronson and B. David Chen 379 A primary/secondary memory implementation of a forward network simplex algorithm for multiperiod network flow problems

Cliff Ragsdale and Antonie Stam 393 A note on solving quadratic programs using mixed-integer programming

NUMBER 5

i Softstrip® data strip containing the table of contents of this issue

Vahid Lotfi 397 A labeling algorithm to solve the assignment problem

Y. L. Chen and Y. H. Chin 409 Scheduling unit-time jobs on processors with different capabilities

Yash P. Gupta, Tor Guimaraes and T. S. Raghunathan 419 Personal computing problems and some organizational factors: a multivariate analysis

Kyung Y. Jo 431 A Lagrangian algorithm for computing the optimal service rates in Jackson queuing networks

Vernon Rego and Wojciech Szpankowski 441 The presence of exponentiality in entropy maximized M/GI/1 queues

Jean-Yves Potvin, Guy Lapalme and Jean-Marc Rousseau 451 ALTO: a computer system for the design of vehicle routing algorithms

Thuruthickara C. John 471 Tradeoff solutions in single machine production scheduling for minimizing flow time and maximum penalty

Stephen A. Floyd, Charles F. Turner III and K. Roscoe Davis 481 Model-based decision support systems: an effective implementation framework

Note

Norman P. Archer 493 Electronic spreadsheet structures

NUMBER 6

i Softstrip® data strip containing the table of contents of this issue

Edward Wasil, Bruce Golden and Li Liu 497 State-of-the-art in nonlinear optimization software for the microcomputer

Fatemeh Zahedi 513 Quantitative evaluation of micro versus larger database products

Veena Adlakha and Tigineh Morsha 533 Two heuristic techniques for service location: an evaluation and comparison

Sang O. Kim and Marc J. Schniederjans 541 Heuristic framework for the resource constrained multi-project scheduling problem

Marc J. Schniederjans and Radhika Santhanam 557 A zero–one goal programming approach for the journal selection and cancellation problem

Y. P. Gupta and D. C. W. Chin 567 Expert systems and their applications in production and operations management

C. R. Bector, Y. P. Gupta and M. C. Gupta 583 V-shape property of optimal sequence of jobs about a common due date on a single machine

Wen Lea Pearn 589 Approximate solutions for the capacitated arc routing problem
